1. OVERVIEW

Introduction

The following information is compiled in terms of the requirements of the Banks Act 1990 (as amended) and Regulation 43 of the Regulations relating to Banks (“the Regulations”), whereby banks are obliged to publicly report certain qualitative and quantitative information with regards to their risk profile and capital adequacy regularly to the public. This disclosure is commonly known as Pillar 3 of the Basel Accord.

China Construction Bank Corporation, Johannesburg Branch (hereafter referred to as CCB-JHB or the Branch) is an overseas branch of China Construction Bank Corporation (incorporated in the People’s Republic of China).

CCB-JHB’s business model is that of a corporate and merchant bank, servicing the South African business community and promoting Chinese/African investments primarily within the Sub-Saharan region of Africa.

The Executive Management Committee (EXCO) is responsible for establishing and maintaining an effective internal control structure, in respect of the disclosure of financial information in line with Pillar 3 requirements. The EXCO-approved Regulatory Disclosure Policy sets out the policy requirements for disclosure by CCB-JHB in line with applicable directives issued by the Regulator (refers to the Prudential Authority (PA)).

This document sets out the Semi-annual Pillar III Disclosures as applicable to CCB-JHB as December 2023, also referred to as H2 2023. Where referring to prior period, this should be interpreted as 30 June 2023 (also referred to as H1 2023), unless stated otherwise.

All amounts/figures are reported in R’000 unless stated otherwise within this disclosure.

Directive 1/2019 and Related Tables within Presented Disclosure

The following tables as per Directive 1 of 2019 have not been included in this disclosure with explanations:

Directive 1 of 2019: Semi-Annual Disclosure required tables per Annexure 1	Explanation
CR6, CR7, CR10, CCR4, MRC, MR2, MR4	❖ Not applicable due to regulatory reporting approach adopted by the Branch
CCR6, CCR8	❖ Not applicable due to nature of business, as no items to be disclosed
SEC1, SEC2, SEC3, and SEC4	❖ Not applicable, as CCB-JHB has no securitisation exposures
TLAC1, TLAC2, and TLAC3	❖ Not applicable, as CCB JHB is not a G-SIB and the South African Prudential Authority is not the home regulator of the CCB Group, regulated in China
CC2	❖ Not applicable, CCB-JHB does not issue semi-annual financial statements.

Financial Highlights and Key Ratios (as per regulatory reporting)

As at 31 December 2023, the financial position of the Branch was as follows:

- ❖ Total assets of R 44 490 246;
- ❖ Total liabilities of R 37 688 610; and
- ❖ Total equity of R 6 801 636.

Total assets increased by 7.80% compared to 30 June 2023 (R 41 272 877). The increase in total assets is mainly due to new loans and advances to customers and purchase of bonds in the period.

For the 12 months period, from 1 January 2023 to 31 December 2023, the Branch reported Net Profit after Tax (NPAT) of R 490 118. For the 6-month period under disclosure, the Branch reported a NPAT of R195 881 (R294 236 as of June 2023), the decrease is due to both increased credit impairments and IRS revaluations, and is in line with expectations.

Over the year, operating income increased due to increasing average interest bearing assets.

Key capital features are as follows:

- ❖ The qualifying capital and reserve funds of the Branch as of 31 December 2023 is R 6 819 700.
- ❖ The Capital Adequacy Ratio (CAR) of the Branch as at 31 December 2023 was 29.87%.
- ❖ The Leverage Ratio of the Branch as at 31 December 2023 was 14.23%.

Key liquidity ratios are as follows:

- ❖ The Liquidity Coverage Ratio (LCR) of the Branch as at 31 December 2023 was 300.59%.
- ❖ The Net Stable Funding Ratio (NSFR) of the Branch as at 31 December 2023 was 129.82%.

2. CAPITAL MANAGEMENT

Capital Adequacy and Capital Composition

The total regulatory capital minimum requirement as per Directive 5 of 2021, “Capital Framework for South Africa based on the Basel III framework”, is set at 11.50%, excluding bank specific add-ons.

For the period under review, CCB-JHB maintained both regulatory and internal minimum capital requirements, as stipulated in the Banks Act and in the Branch’s Internal Capital Adequacy Assessment Process (ICAAP) respectively.

CCB-JHB’s capital structure is as follows:

- ❖ Paid in capital amount qualifying as Common Equity Tier 1 (CET1) capital;
- ❖ Retained earnings accumulated since the Branch’s creation qualifying as CET1 capital;
- ❖ Other Reserves qualifying as CET1;
- ❖ General allowance for credit impairments qualifying as Tier 2 capital;
- ❖ Regulatory adjustment as prescribed by the Regulator.

There are no restrictions on the transfer of qualifying capital and reserve funds within the CCB banking group. CCB-JHB complies with local requirements in terms of the transfer of qualifying capital and reserve funds outside of South Africa.

CCB JHB has high-quality capital with 97,85% of total capital constituting CET1. CET1 is suitable to absorb losses and retain value under stressed conditions. There have been no material changes in the capital composition/structure of CCB-JHB during H2 2023.

Capital Position, Capital Adequacy and Leverage Ratio Levels as at 31 December 2023

The total qualifying capital and reserve funds of the Branch were R 6 819 700 as at 31 December 2023. As in prior periods, retained earnings steadily increased the Branch’s capital position.

The Branch reported a CAR of 29.87% and a leverage ratio of 14.23% as at 31 December 2023.

In line with the Branch’s business strategy and planned capital deployment, the CAR decreased during H2 2023, the increase of total Risk Weighted Assets (RWA) is predominantly driven through credit risk with new loans and advances replacing short-term loans/placements. To a lesser extent, the CAR also decreased due to an increase in replacement cost of FX derivatives, resulting in higher counterparty credit risk (CCR).

The leverage ratio decreased, due to the increase of the total exposures (driven by total balance sheet).

The Branch’s capital level is deemed appropriate to support CCB-JHB’s business operations, enable execution of the desired growth strategy, continue to operate under stressed conditions, and implement all regulatory reforms and anticipated resulting potential increases in capital minimum requirements.

CCB-JHB is currently implementing Regulatory Reforms (RR) as per Guidance Note 3 of 2023, “Proposed implementation dates in respect of specified regulatory reforms”, of which some will have a direct impact on minimum capital requirements. More detail is provided in risk-specific sections below.

CC1: Composition of Regulatory Capital

R' 000 At 31 December 2023		Notes	a	b
			Amounts	Source based on reference numbers/letters of the balance sheet under the regulatory scope of consolidation
Common Equity Tier 1 capital: instruments and reserves				
1	Directly issued qualifying common share (and equivalent for non-joint stock companies) capital plus related stock surplus		3,385,642	BA 700 Line 28
2	Retained earnings		3,257,317	BA 700 Line 29
3	Accumulated other comprehensive income (and other reserves)		158,679	BA 700 Line 31
4	Directly issued capital subject to phase-out from CET1 (only applicable to non-joint stock companies)			
5	Common share capital issued by third parties (amount allowed in group CET1)			
6	Common Equity Tier 1 capital before regulatory deductions		6,801,638	BA 700 Line 27
Common Equity Tier 1 capital regulatory adjustments				
7	Prudent valuation adjustments		128,196	BA 700 Line 206
8	Goodwill (net of related tax liability)		-	
9	Other intangibles other than mortgage servicing rights (net of related tax liability)		89	BA 700 Line 44

United Kingdom	2%	933,496	933,496		
Sum		1,805,971	1,805,971		
Total				0.31%	69,970

Notes

CCB-JHB is subject to Countercyclical Buffer (CCyB) requirements in the following jurisdictions: UK and Netherlands.

Capital Management Framework

CCB-JHB quantifies and holds capital against risks specified as Pillar I risks, in terms of the minimum requirements as per the Banks Act and Regulations. These risks include credit, counterparty credit, market and operational risk.

Further, CCB-JHB considers other risks for which an explicit regulatory capital treatment is not present, commonly referred to as Pillar 2 risks, such as, but not limited to, positions that result in concentrated exposures to a type of counterparty or industry, as well as liquidity risk and interest rate risk in the banking book. For these types of risks, Senior Management deliberates the potential risk impact at various committees.

The potential risk impact is further quantified as part of the Branch's annual ICAAP, which includes stress testing for material risk types. The potential impact on capital is summarised in the CCB-JHB's ICAAP document, which is developed in alignment with the SARB Guidance Note 4/2015.

The Capital Management Framework, ICAAP and Recovery and Resolution Plan (RRP) inform the capital management strategy for CCB-JHB. This ensures that the Branch's capital:

- ❖ remains sufficient to support the Branch's risk profile and outstanding commitments;
- ❖ exceeds the regulatory minimum capital adequacy by an appropriate internal buffer;
- ❖ is able to activate capital recovery options should a severe economic downturn materialise; and
- ❖ remains consistent with the Branch's strategic and operational goals for the next five years, and aligned to CCB Group's expectations.

3. CREDIT RISK

The Branch's credit risk arises through its lending activities and includes credit default risk, pre-settlement risk, country risk, and concentration risk.

A counterparty is considered to be in default when:

- ❖ The counterparty is unlikely to repay their credit obligations to the Branch in full, without recourse by the Branch to actions, such as realising security (if any is held)
- ❖ The counterparty is more than 90 days past due on any material credit obligation to the Branch
- ❖ Overdrafts are considered past due once the customer has breached an advised limit or been advised of a limit that is smaller than the current amount outstanding.

As per the current business model and CCB-JHB's core business, the Branch's primary exposure to credit risk arises through its loans and advances. The credit exposure is represented through the carrying amounts of the financial assets on the statement of financial position, as well as to off-balance sheet credit risk through commitments in respect of undrawn committed facilities, and guarantees. The Branch is also exposed to credit risk to a lesser degree on various other financial assets, including derivative financial instruments and interest-bearing securities.

The Branch's lending strategy has remained stable over the years.

Governance and Credit Risk Management

The Branch's Credit Committee (CC) and the Risk, Compliance and Internal Control Committee (RCICC) are tasked to identify, manage and monitor credit risk. The CC is the approval authority of credit facilities, and it exercises its authority within limits and parameters delegated by CCB Head Office. RCICC monitor(s) credit risk of existing loans and advances portfolio, including country risk and concentration risk assessments, and is responsible for IFRS 9 impairment processes, including approving all material aspects of the model design, development, validation and model enhancement. EXCO has the overall responsibility for credit risk and for approving recommended improvements for credit risk governance and management and, if necessary, adjusting the credit risk appetite of the Branch.

The Risk Management Department (RMD) carries out daily risk monitoring functions and ensures both RCICC and CC decisions are executed. The credit risk function mainly entails ongoing management of credit risk, which includes validating internal credit ratings, carrying out credit risk assessment, providing risk review opinions on credit submissions, performing continuous post-loan management, reviewing and recommending loan classification, and loan provision levels through the IFRS9 stage classification. The function also monitors compliance with various key credit related policies.

There has been no major change in managing credit risk in H2 2023.

Credit Quality of Assets

Overall credit quality of assets remained stable over H2 2023. The Branch does not have defaulted, past-due exposures or restructured exposures.

CR1: Credit quality of assets

R' 000 At 31 December 2023	a		b	c	d		e	f	g	
	Gross carrying values of		Allowances / impairments	Of which ECL accounting provisions for credit losses on SA exposures	Allocated in regulatory category of Specific	Allocated in regulatory category of General	Of which ECL accounting provisions for credit losses on IRB exposures	Net values (a+b-c)

2	Debt Securities	-	20,711,717	51,666	-	51,666	-	20,660,051		
3	Off-balance sheet exposures	-	5,856,312	21,425	-	21,425	-	5,834,887		
4	Total	-	48,431,353	146,348	-	146,348	-	48,285,005		

Notes

N1: The increase in impairments relating to loans is due to an increase in loans.

CR2: Change in stock of defaulted loans and debt securities

There were no defaulted exposures during 2023 and thus CR2 is not applicable to CCB-JHB.

Credit Risk Mitigation (CRM)

The Branch holds approved collateral that is acceptable in reducing credit risk. The nature of the collateral must meet the minimum requirements stipulated in relevant policies and procedures defined by the branch around collateral management. Preference is given to collateral types that are easily valued and realisable. The Branch may accept credit insurance from accredited insurers. For regulatory capital management, CRM (netting, guarantees, collateral, and others) is recognised only where regulatory and contractual requirements have been met.

4	Of which defaulted	-	-	-	-	-	-

Notes

N1: Please refer to CR1.

Measurement of Credit Risk

From a regulatory capital requirement perspective, CCB-JHB is currently using the Standardised Approach for measuring credit risk. This approach is based on counterparties' external ratings mapped to pre-defined risk-weight ratios using the ratings table included in Regulation 23 of the Regulations to the Banks Act. If no external rating is available, the credit exposure will be allocated a conservative risk weight based on the local regulatory requirements.

CCB-JHB is preparing for the implementation of the revised Standardised Approach, with full implementation expected from July 2025, as per Guidance Note 3 of 2023. Although credit risk capital demand is generally the largest capital charge for the Branch, the potential additional impact through the Revised Standardised Approach is not anticipated to be significant. This is mainly due to the nature of business of CCB-JHB, as well as CCB-JHB already making use of the Standardised Approach for measuring and reporting credit risk (hence no capital output floor to be considered).

CR4: Standardised approach - credit risk exposure and credit risk mitigation (CRM) effects

13	Other assets	N3	192,904	-	192,904	-	192,904	100%
14	Total		41,781,063	5,856,312	41,781,063	2,923,057	19,752,915	

Notes

- N1: No significant movement between asset classes is noted, all have remained within the threshold as set by the Branch.
N2: Non-SA sovereign bonds were purchased in Q4 2023, resulting in a small RWA exposure for this specified asset class.
N3: Other assets do not include deferred tax.

CR5: Standardised approach - exposures by asset classes and risk weights

R'000 At 31 December 2023		a	b	c	d	e	f	g	h	i	j
Risk weight	Asset classes	0%	10%	20%	35%	50%	75%	100%	150%	Others	Total credit exposures amount (post CCF and post CRM)
1	Sovereigns and their central banks	20,095,211		263,507							20,358,718
2	Non-central government public sector entities (PSEs)										
3	Multilateral development banks (MDBs)										
4	Banks N1	3,914,742		478,570		1,608,112		8,301,285	912,933		15,215,642
5	Securities firms

7	Regulatory retail portfolios										
8	Secured by residential property										
9	Secured by commercial real estate										
10	Equity										
11	Past-due loans										
12	Higher-risk categories										
13	Other assets							192,904			192,904
14	Total	24,009,953	0	742,077	0	1,608,112	0	17,431,045	912,933	0	44,704,121

Notes

N1: There are no significant changes in risk profile; the 150% exposure relates to a credit exposure in a country that was recently downgraded, the credit quality of the counterparty remains strong.

4. COUNTERPARTY CREDIT RISK

Counterparty Credit Risk (CCR) arises from the derivatives exposure of CCB-JHB. The Branch's derivative portfolio consists of Interest Rate Swaps (IRS) and Foreign Exchange Contracts (FECs). IRS are solely to hedge interest rate risk, while FX derivatives are for hedging and funding purposes.

Counterparty Credit Risk Governance and Management

The responsibility of CCR governance and strategy resides with the Assets and Liabilities Committee (ALCO), which delegates measurement, monitoring and reporting responsibilities to relevant departments (RMD, Treasury and Accounting) as stipulated by the Branch's Counterparty Credit Risk policy.

CCR management relies on:

- ❖ dedicated credit lines for derivatives with banks having signed ISDA master agreements;
- ❖ CSA agreements entered into with selected counterparties;
- ❖ an automated limit system to prevent limit breach;
- ❖ daily regulatory CCR capital requirement calculation; and
- ❖ monitoring and reporting of exchange rates and any significant market event possibly affecting CCR levels.

CCB-JHB exchanges daily cash variation margin with selected banking counterparts. These amounts are disclosed below in CCR5. Until the end of the reporting period, CCB-JHB has prudently elected to exclude daily cash variation margin from regulatory CCR capital requirement calculation.

Counterparty Credit Risk Position

The Branch has reported a fair value movement in derivative instruments of R319 732 arising from exchange rate fluctuations. During the period, the ZAR's volatility against major currencies impacted the replacement cost of the Branch's foreign currency derivatives.

There are two components for the CCR calculation as detailed as below:

- ❖ CCR calculated based on the Standardised Approach (SA-CCR)
- ❖ Credit valuation adjustment (CVA) based on the Standardised CVA calculation with prescribed risk-weight ratios based on external ratings (ECAIs).

CCB-JHB does not enter into Securities Financing Transactions (SFTs).

CCB-JHB is preparing for the implementation of the Revised Credit Valuation Adjustment Framework (CVA). CCB-JHB is currently using the new framework for internal reporting purposes and measuring impact on capital requirement. Full implementation is expected from July 2025.

CCR1: Analysis of counterparty credit risk (CCR) exposure by approach

		a	b	c	d	e	f
		Replacement cost	Potential future exposure	EEPE	Alpha used for computing regulatory EAD	EAD post CRM	RWA
R'000 At 31 December 2023							
1	SA-CCR	401,614	346,692		1.4	1,047,629	827,822
2	Internal Model Method (for derivatives and SFTs)			-	-	-	-
3	Simple Approach for credit risk mitigation (for SFTs)					-	-
4	Comprehensive Approach for credit risk mitigation (for SFTs)					-	-
5	VaR for SFTs					-	-
6	Total						827,822

Notes

N1: The significant increase in RWA is mainly due to a significant increase of the total replacement cost of FX derivatives as end of 2023. Total replacement cost increased from R141Mn in June 2023 to R402Mn in December 2023, of which most of the increase is noted on USD/ZAR FX derivatives.

CCR2: Credit valuation adjustment (CVA) capital charge

		a	b
		EAD post CRM	RWA
R'000 At 31 December 2023			
Total portfolios subject to the advanced CVA capital charge		-	-
1	(i) VaR component (including the 3x multiplier)		-
2	(ii) Stressed VaR component (including the 3x multiplier)		-
3	All portfolios subject to the Standardised CVA capital charge	827,822	470,349
4	Total subject to the CVA capital charge	827,822	470,349

Notes

Please refer to CCR1.

Intragroup exposures are risk weighted at 0% thus are not subject to Standardised CVA capital charge.

CCR3: Standardised approach - CCR exposures by regulatory portfolio and risk weights

	a	b	c	d	e	f	g	h	i	j
R'000 At 31 December 2023										
Risk weight										
Regulatory Portfolio	0%	10%	20%	35%	50%	75%	100%	150%	Others	Total credit exposure
Sovereigns and their central banks	-	-	-	-	-	-	-	-	-	-

1 Cash – domestic currency	-	147,597	-	-	-	-
2 Cash – other currencies	-	-	-	-	-	-
3 Domestic sovereign debt	-	-	-	-	-	-
4 Government agency debt	-	-	-	-	-	-
5 Corporate bonds	-	-	-	-	-	-
6 Equity securities	-	-	-	-	-	-
7 Other collateral	-	-	-	-	-	-
8 Total	-	147,597	-	-	-	-

Notes

The collateral relates to the cash variation margin exchanged as per the Credit Support Annexure (CSA) agreements that are in place.

5. LIQUIDITY AND FUNDING RISK

As part of its operations, the Branch is exposed to liquidity risk encompassed in financial risks relating to assets and liabilities, comprising of funding risk, market liquidity risk, currency mismatch, and concentration risk.

The Branch has the full support of its Head Office, however, it is the Branch's responsibility to maintain a strong liquidity and funding position at all times.

Liquidity and Funding Risk Governance and Management

The Branch's RCICC governs and oversees liquidity risk, in accordance with the Branch's risk appetite and liquidity risk framework. The committee is responsible for establishing policies and contingency plans, which detail the responsibilities, management processes, governance, stress testing, and monitoring procedures for managing liquidity.

The ALCO is mandated by the EXCO to ensure supervision of liquidity and funding risks within the risk appetite, internal limits, and prudential requirements. The committee conducts monthly meetings to monitor the liquidity position and to elect strategies to optimise the structure of the balance sheet. The risk management function is tasked with monitoring liquidity risk and making recommendations to the committee with regard to the management of liquidity. The Treasury function is required to execute these strategies and manage the Branch's liquidity daily.

The Branch aims to manage liquidity efficiently, ensuring continuous banking operations in both normal and stressed conditions. Adherence to prudential and internal requirements drives the execution of this strategy, with metrics such as the Liquidity Coverage Ratio (LCR) and the Net Stable Funding Ratio (NSFR).

The strategy is to diversify funding through sustainable sources to build a profile that enables the Branch to achieve its strategic objectives efficiently; depositor concentration is monitored continuously.

LCR and NSFR Positions

The Branch's liquidity profile has shown short-term resilience throughout the year, with LCR at 300.59% as at 31 December 2023. The portfolio of high-quality liquid assets (HQLA) remained stable from the prior reporting date. The Branch maintained LCR compliance in excess of both the internal buffers and regulatory requirements.

The NSFR demonstrates the Branch's funding stability and medium/long-term resilience. As at 31 December 2023, NSFR was reported at 129.82%, stable from prior reporting and compliant with regulatory and internal thresholds at the end of 2023.

Both LCR and NSFR are monitored daily, and adjustments, where applicable, are made to ensure continuous compliance with both internal and regulatory requirements.

LIQ2: Net stable funding ratio (NSFR) Q4 2023

33	Total RSF						17,297,990
34	Net Stable Funding Ratio (%)						130%
	N1						

Notes

N1: The NSFR has consistently exceeded the regulatory requirement during the reporting period, 131% in June 2023 and 130% in December 2023. The ratio has been consistent with the Branch's risk appetite. The internal requirement for NSFR is reviewed on an annual basis to ensure appropriateness to absorb any systemic volatility, if experienced.

N2: The derivative assets and derivative liabilities are reported as per the BA100.

34	Net Stable Funding Ratio (%)					115%

6. INTEREST RATE RISK IN THE BANKING BOOK (IRRBB)

The interest rate risk exposure emanates from the banking book, as assets and liabilities are subject to repricing risk, yield curve risk, and basis risk.

Governance and Management

The ALCO oversees interest rate risk in accordance with the Branch's policy and contingency plan approved by the RCICC. ALCO is responsible for establishing the appropriate risk appetite for IRRBB and monitoring adherence to internal limits. Operationally, the Treasury function is responsible for the daily management of interest rate, risk per guidelines stipulated by the ALCO.

The Branch aims to maintain a balance sheet profile with natural interest rate risk offsets. In cases where there are no natural offsets, interest rate risk is hedged using appropriate derivatives, which can affect CCB-JHB's income statement. In mitigation, the Branch has implemented fair-value hedge accounting to align the economic substance of the hedges with their accounting treatment.

IRRBB is quantified using metrics such as the contractual and Business as Usual net repricing mismatch, Net Interest Income (NII) and Economic Value of Equity (EVE) sensitivity. In addition, stress testing is conducted, with relevant reporting to ALCO, RCICC, Head Office and the local regulator.

The Revised Interest Rate Risk in the Banking Book (IRRBB) introduces the Supervisory Outlier Test (SOT), measuring Economic Value of Equity (EVE) sensitivity to various specified regulatory interest rate shocks as a percentage of Tier 1 capital.

Risk Position

Both NII and EVE sensitivities, which assess the impact of interest rates on earnings and equity of the Branch, remained within the Branch's appetite during H2 2023. As end of December 2023:

- ❖ the adverse correlated risk shock – NII impact - represented 52.56% of the 12 month forecasted NII; and
- ❖ the maximum (loss) of EVE represented 20.34% of Tier 1 capital (SOT).

CCB-JHB monitors levels against established risk appetites and global standards.

Additional disclosure on IRRBB may be found in the CCB-JHB Pillar 3 annual disclosure.

7. MARKET RISK

The Branch's exposure to market risk primarily stems from positions resulting from the facilitation of client flows in foreign exchange and money markets. This consists of foreign exchange risk.

CCB-JHB has no trading book exposure. CCB-JHB has no securitisation exposure nor equity, credit default or commodities derivatives exposure. CCB-JHB interest rate derivatives are booked with the parent company for hedging purposes and do not attract regulatory capital requirement.

Market Risk Governance and Management

The ALCO is accountable for the oversight of the governance and effectiveness of the market risk framework. The committee approves the market risk appetite and related limits following both Head Office and local requirements. The committee reviews the market risk exposure monthly and ensures the effectiveness of the management process and approved strategy.

In mitigation of this risk:

- ❖ only highly liquid currencies are exchanged;
- ❖ FECs are in place;
- ❖ open positions are squared-off at end of day; and
- ❖ strict intra-day and overnight limits are in place with regards to open foreign currency positions and monitored daily.

Market Risk Measurement

The Standardised Approach is used for calculating the market risk capital requirement as per the regulations. It is driven by the net open foreign currency position held by CCB-JHB, of which are managed to reduce impact on capital requirement.

CCB-JHB is preparing for the implementation of the Revised Market Risk Framework (encompassed within the FRTB Framework) and established regulatory requirements. Full implementation is expected from July 2025. Relevant applications have been submitted to the regulator with regard to the method for measuring market risk, CCB-JHB, for internal reporting purposes, will be making use of the new measure from H1 2024.

During H2 2023, the Branch has not detected market risk events that would have a significant effect on the Branch.

Additional disclosures on market risk are reported in the CCB-JHB Pillar 3 annual disclosure.

MR1: Market risk under the standardised approach (SA)

R'000 At 31 December 2023		a
		Capital charge in SA
1	General interest rate risk	-
2	Equity risk	-
3	Commodity risk	-
4	Foreign exchange risk	870
5	Credit spread risk - non-securitisations	-
6	Credit spread risk - securitisations (non-correlation trading portfolio)	-
7	Credit spread risk - securitisation (correlation trading portfolio)	-
8	Default risk - non-securitisations	-
9	Default risk - securitisations (non-correlation trading portfolio)	-
10	Default risk - securitisations (correlation trading portfolio)	-
11	Residual risk add-on	-
12	Total	870

Notes

Market risk is not significant for the Branch, as the Branch does not have a trading book and as a result maintains a low open foreign currency position.

8. OPERATIONAL RISK

Operational risk can cause financial loss, reputational loss, loss of competitive position, or regulatory sanctions. Such risk can be minimised by the implementation of adequate infrastructure, controls, systems, and appropriately trained/skilled staff. Operational risk is an inherent risk in the ordinary course of business activity.

Operational Risk Governance and Management

The Branch appropriately identifies and manages operational risk within acceptable levels by the adoption of sound operational risk management practices. The operational risk management policy is embedded at all levels of the Branch, supported by the risk culture, and is continually enhanced in line with regulatory and industry developments, CCB Head Office, and Branch requirements; this in turn facilitates ongoing operational risk resilience. RCICC is the governing committee for identifying, monitoring and mitigating this risk.

There have been no material changes in terms of the strategy and management of operational risk.

Operational Risk Measurement and Position

From a regulatory perspective, the Branch applies the Basic Indicator Approach (BIA) for the assessment of regulatory capital; the BIA calculation is based on a multiplication factor that is applied to gross operating income.

Operational capital requirement slightly decreased from H1 2023 to H2 2023 due to a decrease in gross operating income in H2 2023.

No material operational losses occurred in H2 2023.

CCB-JHB is preparing for the implementation of the Revised Standardised Approach for measuring operational risk. Full implementation is expected to be achieved by the compliance date as confirmed by the PA (July 2025).

Additional disclosure on operational risk may be found in the CCB-JHB Pillar 3 annual disclosure.
